

TMI has created this useful tool to assist in calculating a composite rate using a CLEC pricing structure.

CLEC Switched Access Rate Cap Summary

The Summary, in an Excel format, assists you in identifying where rate caps exist for switched access services charged by Competitive Local Exchange Carriers (“CLEC”) and includes links to worksheets containing applicable switched access rates.

Convenient links include:

- Intrastate rates
- RBOC Interstate switched access rates
- Also includes “Source” links to the supporting regulatory documentation, such as a Commission Rule or Statute.

Rate worksheets contain FGB/FGD DS1 premium switched access rates. Each worksheet is divided into three major sections:

- **Per Minute Access Charges**
Includes Carrier Common Line, Switched Transport, Local Switching, and other miscellaneous elements.
- **Total One Minute Call**
Contains the calculated originating and terminating rates for a one minute call based on certain mileage and minutes of use defaults.
- **Other Access Charges**
Includes other charges related to switched access service which do not lend themselves to a per minute charge. Includes Equal Access Cost Recovery, 800 call origination and more!

*Recommended for:
Any telecom service providers establishing their
own switched rates .*
